

General Document of Green Energy Book

About Green Energy Book

The “Green Energy Book” (hereinafter referred to as "GEB" or "platform") is a comprehensive international platform that integrates multiple functions to accelerate global green energy circulation. It aims to strengthen technical exchange, expand investment opportunities, ensure sustainability, and enable full life-cycle tracking of green energy products—actively contributing to carbon neutrality goals and energy security.

Important Notice

This document is a placeholder. Detailed operational manuals, terms of service, privacy policy, and other specific documentation are currently under development and will be provided in subsequent versions with complete content.
